Needibi Serve

Master UI/UX Design & Build Prompt React Web Platform

One complete prompt for a senior product designer and React front-end team: every feature, every role, every screen — with brand system, Amazon / Alibaba-grade marketplace patterns, and acceptance criteria.

Get Your Needs Served. | Needs · Bundles · Deals | Needer · Partner · Agent · Admin

Product
Needibi Serve (Web)

Stack
React 18 + TypeScript

Version
2.1 — October 2026

How to use this prompt

Paste the whole document (or section by section) into your AI design/coding tool, or hand it to your designer and front-end team. A companion `NEEDIBI_SERVE_WEB_DESIGN_PROMPT.md` file holds the same prompt for coding tools. It merges the original **Web Features list** and the **Needibi Serve Improvements 1.0** specification into one source of truth.

Role instruction (copy this first)

You are a **senior product designer and lead React front-end engineer** with 12+ years building large two-sided marketplaces (Amazon, Alibaba, Jumia, Upwork, Airbnb level). Design and build the complete **Needibi Serve** web platform described below. Apply the brand system in Section 4 exactly. Borrow proven marketplace patterns from Section 3 but never copy another brand's logo, name, trademark or exact layout. Every screen must be production-quality, responsive (desktop → tablet → phone), accessible (WCAG 2.2 AA), light + dark theme, and built from reusable React components. Where this prompt is silent, make the decision a top marketplace designer would make and note it in a "Design decisions" list.

Conflicts resolved between the two source documents

- **Contributor role is removed.** Roles are Visitor, Needer, Partner, Agent, Admin. Contributor features fold into Partner (serving, listings) or Agent (assisted onboarding).
- **"Request Similar" / "Re-inquire" / "Re-request Similar" → Re-request** everywhere. **Re-need** is a separate action (instant repost).
- **Deals now support** Love, Message, Save, Share and Follow Partner (the old list said Deals have no like or comment).
- **Chat is no longer open messaging.** Needers cannot start chats; Partners/Admins open chat from a request card once the request is going to be served (Section 15).
- **Public comments are moderated "Messages"** — pending review, no contact details allowed (Section 9).
- **Matching has three admin-switchable modes:** Manual, Automatic, Limited-Offer (Section 13).

Contents

1 Product, promise & roles

34 Screen inventory & deliverables
35 Roadmap & open decisions

01

Product, promise & roles

Needibi Serve is a trusted, request-driven marketplace that helps people get products, services, vehicles, properties, professional talent, deals and custom solutions **served** through a controlled process. Tagline: **Needibi Serve — Get Your Needs Served.**

> **The one promise every screen must support**
> The Needer describes what is needed → Needibi Serve finds appropriate, verified options → the Needer chooses how to proceed → payment is protected in escrow until the Needer confirms satisfaction.

Core 7-step journey (show it on Home, How It Works, and every tracker)

1 Submit — 2 Validate (policy check) — 3 Match — 4 Respond (accept / decline) — 5 Execute — 6 Pay (escrow release) — 7 Close (audit)

Roles and what each one can do

Role	Purpose	Key permissions
Visitor	Browses approved public Needs, Bundles, Deals, Partners, Help Centre.	Search, view, share. Sign-in prompt on Serve, Love, Save, Message, Book.
Needer	Creates Needs and Bundles, discovers Deals, receives and evaluates offers, chooses providers, follows Partners, tracks fulfilment.	Post, Re-need, Re-request, accept/reject offers, pay, confirm satisfaction, review, dispute, open tickets. Cannot start chats.
Partner	Verified (KYC) provider who serves Needs, submits offers, publishes Deals (subject to approval), fulfils agreements, builds reputation.	Serve, Chat (when unlocked), Reject with reason, publish Deals, manage jobs, earnings, payouts, guilds.

Role	Purpose	Key permissions
Agent	Field helper: assists Needers who can't fill forms, onboards Partners, follows up cases, earns verified referral rewards.	Only assigned cases. Act on behalf of linked Needers; register Partners; referral codes.
Admin / Staff	Runs the marketplace: approvals, verification, matching, disputes, users, payments, moderation, subscriptions, analytics.	Full console with role-based permission matrix and audit trail on every sensitive action.

Categories (seed data for navigation, filters and matching)

Agriculture · Automotive & Vehicles · Beauty & Wellness · Education & Training · Electronics · Food & Catering · Health · Home & Furniture · Real Estate & Property · Professional Talent · Services (cleaning, repair, moving, events) · Travel & Tourism · Custom Solutions. Each has subtypes managed by Admin.

Business facts to show in the UI

- Posting a Need is **free**. Partners are **KYC-verified**. Jobs are **contract-based**. Payments are **held in escrow** and released only after the Needer confirms satisfaction. Every action leaves an **auditable trail**.
- Powered by NEEDIBI ONLINE SERVICES LTD · info@needibi.com · +250 788 813 062 · Kigali · 24/7 support.
- Currency format `RWF 450,000`; phone format `+250 788 123 456`; default country Rwanda, time zone Africa/Kigali.
- Website and mobile apps (Google Play, App Store) — show download badges in footer and Home.

02

Core objects & lifecycles

Three content types drive the platform. Design must make it instantly obvious which one the user is looking at.

Need — what people want
A single request for a product, service, vehicle, property, professional talent or custom solution. Can be text, image, video or voice note. One-time or recurring.

Bundle — many Needs grouped
E.g. "Furnish my 2-bedroom flat" or "Wedding for 200 guests". Each item has its own budget and status; served as a whole or item by item. Can mix recurring and one-time items.

Deal — what is offered
A ready-made offer from Needibi Serve or an approved Partner: product, service, vehicle, property, professional, custom solution, or a bundle of items. Published only after Needibi approval.

Need / Bundle lifecycle (status chips + stepper)

Submitted → Under Review → (Changes Requested) → Approved / Published → Matching → Offers Received → Negotiating → Agreement Signed → Awaiting Payment → Payment Verified (in escrow) → In

Service → Delivered → Completed (confirmed) → Closed. Side states: Rejected, Expired, Cancelled, Disputed, Archived.

Status groups for "My Needs" tabs: Submitted · Action needed · Matching · In progress · Done · Problem — each with count.

Deal lifecycle

Draft → Submitted for approval → Approved / Rejected (with reason) → Published → Paused / Sold-out / Expired. Booking: Requested → Signed → Paid (escrow) → In Service → Done → Confirmed → Reviewed.

Offer lifecycle

Draft → Submitted (occupies a slot) → Clarification requested → Revised → Accepted / Rejected / Withdrawn / Expired (releases slot) → Auto-closed when the scope is fulfilled.

Need card data fields

Title · description · category & subtype · service area (never exact address publicly) · budget or agreed price (clearly labelled) · "Price negotiable" badge · urgency (Low, Medium, High, Urgent) · One-time or Recurring (frequency) · status · poster name or "Anonymous" · media (image, video, audio) · thumbnail · need code (e.g. `NS-24-08731`) · time posted · offer slots (e.g. 2 of 3) · engagement counts.

Approval policy (show as badges and helper text)

- Partner Deals are reviewed by Needibi Serve before going public. Needs and Bundles follow moderation rules. Reposts (Re-need) pass eligibility checks.
- Only approved, currently published content appears in public discovery.
- Always state clearly: *"Approved by Needibi Serve" means reviewed before publishing — it is not a guarantee of a provider's quality or future performance.*

03

Reference platforms — what to borrow

Needibi Serve must feel as familiar and trustworthy as the world's biggest marketplaces, adapted for a request-first, escrow-protected model in Rwanda. Borrow patterns, not branding.

Platform	Pattern to borrow	Needibi Serve version
Amazon	Dark three-tier header: logo, "Deliver to" location, big search with category dropdown, account & orders, cart. Secondary nav strip. Dense, scannable grids. Product page with gallery left, buy box right, star breakdown, Q&A, "Customers also viewed". "Your Orders" with tracking.	Navy header with **"Serving in Kigali"** location, search with Needs/Deals/Bundles/Partners dropdown, **Post a Need** orange CTA. Deal page with sticky **Offer box**. "My Needs" and "My Bookings" modelled on Your Orders.

Platform	Pattern to borrow	Needibi Serve version
Alibaba	RFQ (Request for Quotation) — buyer posts what they want and suppliers quote. "Verified Supplier" badges, supplier company profile, Trade Assurance protection, quote comparison.	Post a Need = RFQ. Offers compared side by side. **Verified Partner** badge, Partner profile, **Escrow Protection** banner at every payment step.
Jumia	African e-commerce: mobile money, flash-deal countdowns, category tiles, trust for first-time online buyers.	MTN MoMo / Airtel Money first. Deal countdown timers. Large category tiles. Plain-language trust copy.
Upwork / Fiverr	Proposals with limited slots, milestones in escrow, seller levels, contract room.	Limited-offer slots (3), milestone escrow, Partner levels, Agreement page.
Airbnb	Booking flow clarity, trust & safety pages, host profile with reviews, clean whitespace.	Deal booking flow, Partner profile with verified reviews, Trust & Safety page.
Instagram / LinkedIn	Feed cards with reactions, save, share, follow; reels.	Needs feed (Needs + Bundles mixed), Love, Save, Share, Follow Partner, Social / Reels.
WhatsApp / Intercom	Chat bubbles, read ticks, typing indicators, pinned panels.	Transaction chat with pinned **Price panel**, read ticks, attachments.
Thumbtack / TheFixerHub	Request-matching onboarding: "What do you need?" first, then pros respond.	Hero asks "What do you need served today?" with one input that opens the Smart Request.

Do not

Copy any logo, mascot, name, colour combination identical to Amazon's (black + yellow), exact page layout, icon or illustration from another brand. Use Needibi Serve's own palette and an original illustration style.

Quality bar

- A first-time user in Kigali on a mid-range Android phone can post a Need in under 2 minutes.
- Information density like Amazon on desktop (4–5 cards per row) but calm, with generous whitespace inside cards.
- Every screen passes the "5-second test": what is this, what is its status, what do I do next?

04

Brand & design system

Needibi Serve palette: deep **Navy** for trust and structure, energetic **Serve Orange** for action, **Trust**

Green for escrow, verification and success. Implement every value as a design token.

Brand direction — three options evaluated, one chosen

A · Navy & Serve Orange

✓ CHOSEN

Trust + energy. Marketplace-grade (Amazon / Alibaba family), strongest contrast, readable on low-end phone screens. Orange makes Post a Need, Serve and Book now unmissable; green is kept for verified, escrow and success.

B · Emerald & Gold

Fresh and local, but close to fintech / agri apps; gold text fails contrast on white; green can't double as "verified" signal.

C · Royal Blue & Coral

Friendly and social, but reads as a social app rather than a trusted marketplace; coral is too close to error red.

If Needibi already has an official logo/palette, only the token values change — every component keeps working.

Brand colours

Needibi Navy
#0B1F3A · primary, header, sidebar, headings

Navy 700
#13305C · secondary nav, hover

Serve Orange
#FF7A1A · primary CTA, active, highlights

Orange 600
#E8620A · CTA hover/pressed, text on light

Trust Green
#16A34A · escrow, verified, success

Info Blue
#2563EB · links, info, Medium urgency

Amber
#F59E0B · warning, High urgency, ratings

Alert Red
#DC2626 · error, Urgent, disputes

Neutrals & dark theme

Token	Light	Dark	Use
`--bg`	#F5F7FA	#0B1220	Page background
`--surface`	#FFFFFF	#121A2B	Cards, modals, tables
`--surface-2`	#FAFBFD	#18223A	Card footers, table zebra
`--border`	#E4E8EF	#25314A	Dividers, inputs
`--text`	#111827	#E7ECF4	Body text
`--text-muted`	#5B6577	#94A0B4	Meta, helper text
`--primary`	#0B1F3A	#8FB3FF	Headings, primary outline
`--accent`	#FF7A1A	#FF8A33	CTA (white text, ≥ 4.5:1 with bold 14px+)

Semantic status colours

Low Medium High Urgent Verified Partner Escrow protected Price negotiable Recurring · Weekly Bundle · 6 items Pending review Disputed

Typography

- **Inter** (UI) and **Inter Display** (headings). Fallback system-ui.
- Scale: 12 / 14 / 16 (body) / 18 / 20 / 24 / 30 / 36 / 48.
- Weights 400, 500, 600, 700, 800. Prices 700–800, tabular numbers.
- Line height 1.5 body, 1.2 headings. Max 72 characters per line in text pages.

Spacing, radius, elevation

- 4-pt grid: 4, 8, 12, 16, 20, 24, 32, 40, 48, 64.
- Radius: 6 inputs/buttons, 12 cards, 16 modals, 999 pills.
- Shadows: sm (cards), md (hover/dropdowns), lg (modals). Hover lifts card 2px.
- Containers: 1440 max, 1280 content; 12-col grid, 24px gutter desktop, 16px phone.

Icons, imagery, motion

- Icons: **lucide-react**, 1.75 stroke, 16/20/24 px.
- Imagery: real photos of Rwandan people, places and products; illustrations flat, warm, using brand palette.
- Logo: orange rounded-square "N" mark + "Needibi Serve" wordmark; white on navy, navy on light.
- Motion: 150–250 ms ease-out; skeleton shimmer; respect `prefers-reduced-motion`.

Voice & tone

- Plain, warm, confident. "Your need is live" not "Entity created".
- Buttons are verbs: Serve, Re-need, Book now, Confirm satisfaction.
- Every empty state teaches the next step.

Design tokens (Tailwind config excerpt)

```
// tailwind.config.ts
theme: { extend: {
  colors: {
    navy:   { 900:'#0B1F3A', 700:'#13305C', 500:'#1C4280', 100:'#E6ECF5' },
    serve:  { 600:'#E8620A', 500:'#FF7A1A', 100:'#FFF1E6' },   // brand accent
    trust:  { 600:'#16A34A', 100:'#E8F7EE' },
    info:   { 600:'#2563EB', 100:'#EAF1FE' },
    warn:   { 500:'#F59E0B', 100:'#FEF5E2' },
    danger: { 600:'#DC2626', 100:'#FDECEC' },
  },
  fontFamily: { sans:['Inter','system-ui'], display:['"Inter Display"','Inter'] },
  borderRadius: { card:'12px', modal:'16px' },
}}
```

05

React architecture & component library

Build for scale: typed, componentised, internationalised, and fast on 3G.

Stack

- React 18 + TypeScript + Vite (or Next.js 14 App Router if SEO/SSR is chosen for public pages — recommended for Needs/Deals SEO).
- Tailwind CSS with tokens above + **shadcn/ui** (Radix primitives) for accessible components.
- React Router v6 (or Next routing); TanStack Query for server state; Zustand for UI state.
- React Hook Form + Zod for all forms and wizards.
- Recharts for dashboards; Framer Motion for micro-interactions.
- i18next for English, Kinyarwanda, French, Swahili.
- Socket/WebSocket for chat, presence, offer slots and notifications.
- Storybook for every component; Vitest + Testing Library; Playwright E2E.

Folder structure

```
src/
  app/              routes, providers, layouts
  design-system/    tokens, primitives (Button, Badge…)
  components/       cards/, feed/, forms/, tables/,
                    chat/, payments/, charts/
  features/         needs/, bundles/, deals/, offers/,
                    matching/, chat/, payments/,
                    disputes/, tickets/, notifications/,
                    reviews/, agents/, admin/, help/
  lib/              api client, auth, i18n, formatters
  locales/          en, rw, fr, sw
  mocks/            MSW handlers + sample data
```

Reusable components to build (Storybook stories for each)

Group	Components
Primitives	Button (primary orange, secondary navy, outline, ghost, danger, icon), Input, Textarea, Select, Combobox, PhoneInput (+250), MoneyInput (RWF), DatePicker, Checkbox, Radio, Switch, Slider, Tooltip, Badge, Chip, Avatar, Tabs, Accordion, Breadcrumb, Pagination, Progress, Skeleton, Toast, Dialog, Drawer, Popover, DropdownMenu.
Marketplace	NeedCard, BundleCard, DealCard, PartnerCard, OfferCard, OfferCompareTable, OfferSlotMeter, PriceBlock, UrgencyBadge, RecurrenceBadge, VerifiedBadge, EscrowBanner, RatingStars, RatingBreakdown, ReviewItem, MediaGallery, VoiceNotePlayer, CountdownTimer, CategoryTile, LocationPicker, CoverageCheck.
Flows	Stepper/Wizard, LifecycleStepper, Timeline, ConfirmDialog, ReasonDialog, ReNeedDialog, ServeBundleChooser, PaymentMethodPicker, SignatureBox, FileUploader (progress, size limits), FilterSidebar, SortMenu, SearchBar with scope.
Dashboards	AppShell, Sidebar (collapsible), Topbar, KPI tile, ChartCard, DataTable (search, filters, sort, pagination, page size, refresh, bulk actions, CSV export, skeleton), ActionNeededBanner, NotificationBell, NotificationItem, EmptyState, ErrorState.

Group	Components
Communication	ChatList, ChatThread, MessageBubble (read ticks), TypingIndicator, PinnedPricePanel, PublicMessageComposer, PublicMessageItem (Pending/Approved/Rejected), TicketThread.

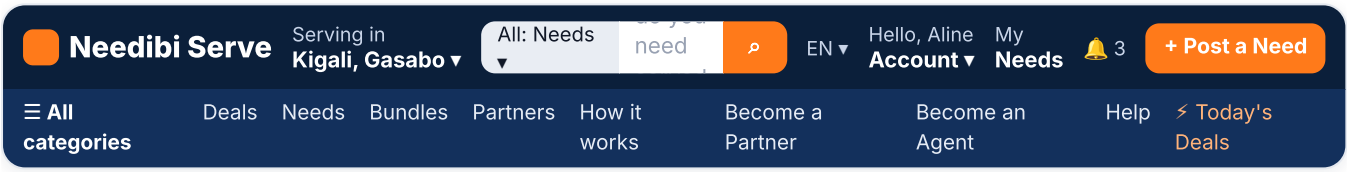

Engineering rules the UI must respect

All permission checks happen server-side; the UI only hides what the user cannot do. Offer slots are allocated atomically (show optimistic state, then confirm). Every list is paginated or virtualised. Images lazy-loaded with blur placeholders; WebP/AVIF. Target Lighthouse ≥ 90 on mobile for public pages.

06

Global layout: header, footer, shells

An Amazon-grade header that puts search and "Post a Need" at the centre of everything.

Header behaviour

- **Tier 1 (navy):** logo · "Serving in" location selector (district/sector; opens map + coverage check) · search with scope dropdown (All, Needs, Bundles, Deals, Partners) and live suggestions (recent, popular, categories) · language · account menu (role switcher for multi-role accounts) · My Needs / My Bookings · notification bell with unread badge · **Post a Need** orange CTA.
- **Tier 2 (navy 700):** "All categories" mega-menu (categories with subtypes and imagery, like Amazon's left drawer) and main sections.
- Sticky on scroll: collapses to slim bar with logo, search, CTA. On phones: logo + bell + avatar, search below, hamburger opens drawer; bottom tab bar (Home, Needs, Post +, Deals, Account).
- Guests see "Sign in" / "Join free" instead of account; gated actions open a sign-in modal that returns them to the same item.

Footer

"Back to top" bar · four columns: **Get to know us** (About, How it works, Trust & Safety, Careers, Blog) · **Earn with Needibi** (Become a Partner, Become an Agent, Publish Deals, Partner guide) · **Let us help** (Help Centre, FAQ, User manual, Support ticket, Disputes) · **Legal** (Terms, Privacy, Cookies, Partner agreement) · app store badges · payment logos (MTN MoMo, Airtel Money, Visa/Mastercard) · language & country · contact line and social links · © NEEDIBI ONLINE SERVICES LTD.

Dashboard shell (Needer, Partner, Agent, Admin)

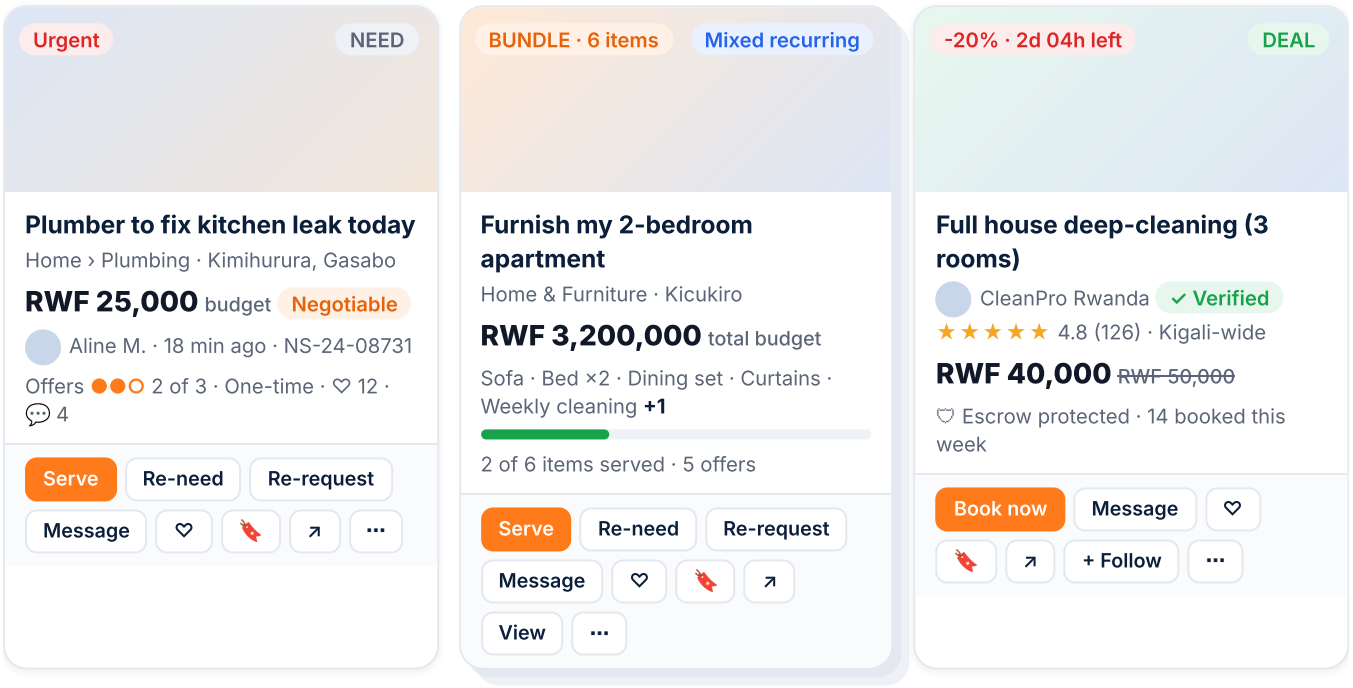

- Left navy sidebar with grouped items, icons, counts, active item with orange left bar; collapsible to icons on tablet; drawer on phone.

- Top bar: breadcrumb, global search, role switcher, theme toggle, language, notification bell, avatar menu.
- Content: page title + primary action at right; Action-needed banner area; KPI row; content.

07

Card designs

Cards are the heart of the product. Modern, scannable, one clear primary action, and instantly distinguishable: **Need** (blue-grey accent), **Bundle** (stacked-card look + orange "Bundle" badge), **Deal** (price-first, commerce look).

Card anatomy rules

- **Media area** 4:3 (or 1:1 in dense grids): image carousel dots, video play icon, voice-note waveform chip for audio-only Needs; text-only Needs get a branded category illustration.
- **Top badges:** left = urgency or deal discount/countdown; right = type label (NEED / BUNDLE / DEAL). Bundles have a stacked-paper edge so they are recognisable in mixed feeds.
- **Body:** title (2 lines max), category · area, price block (labelled "budget", "agreed price", or deal price with strike-through), poster or Partner with verified badge, meta line, offer-slot meter.
- **Action bar:** one filled primary button (orange), others outline/icon with tooltips and counts. Overflow (⋯) holds: Card details, Copy link, Report, Hide, Not interested, Admin actions.
- Whole card clickable to detail (except buttons). Hover: lift + shadow-md + show "Quick view" button (opens side drawer like Amazon quick-look).
- If the chosen visual style hides category tags on cards, categories still power search and matching.
- Privacy: never show phone, email, exact address on any card.

Card button sets (role-aware)

Card	Public / Needer view	Partner dashboard	Admin dashboard
Need	Serve (Partners) · Re-need · Message · Re-request · Save · Share · Love · View details · More (⋯)	Serve · Chat (locked until confirmed) · Reject (reason required, admins notified)	Approve · Chat · Reject (reason required)
Bundle	Serve · Re-need · Message · Re-request · Save · Share · Love · View details · More	Serve (whole / select items) · Chat · Reject (reason)	Approve · Chat · Reject · Assign
Deal	One primary: Get / Book / Request (label set by deal type) · Message · Save · Share · Love · View details · More · Follow Partner	Edit · Pause · View bookings · Stats	Approve · Reject · Feature · Assign

08

Card actions: Serve, Re-need, Re-request & more

Terminology must be identical in UI, backend, notifications, analytics and the user manual.

Action	Meaning
Serve	A Partner submits an offer or begins the serving workflow.
Re-need	Publish the **same** Need or Bundle again as a new record (like reposting on social media).
Re-request	Start a **new, customisable** request pre-filled from an existing Need or Bundle.
Message	Submit a public message (comment) that is reviewed before it becomes visible.
Private chat	Communicate inside an authorised transaction only.

Re-need flow

1. Needer clicks **Re-need**.
2. Compact dialog: thumbnail + title, text "You're about to publish this Need again. Continue?" · Cancel / **Re-need now**.
3. System checks account status, rate limits, prohibited content, publication rules.
4. If eligible → new record published instantly to their feed and public feed; toast "Your need is live again · View". Otherwise → "Sent for review" state.
5. Original stays in history with a "Re-needed" link.

Re-request flow

1. Needer clicks **Re-request**.
2. Smart Request form opens pre-filled (title, category, description, media, area, budget, recurrence).
3. Needer edits quantity, specs, budget, location, timing, recurrence.
4. Review screen with live card preview → Submit.
5. Normal moderation and matching. Never reuse an expired price without revalidation.

Serve flow (single Need)

1. Partner clicks **Serve** → offer drawer: price, what's included, timeline/availability, notes, attachments, validity.
2. Slot meter shows availability (e.g. "1 slot left"). If full: "Offers are full for now — Notify me when a slot opens".
3. Submit → slot reserved atomically → Needer notified.
4. Unverified Partners see "Complete verification to serve" with a link.

Serve flow (Bundle)

1. Partner clicks **Serve** → chooser: **Serve the whole Bundle** or **Serve selected items** (checklist with each item's budget and slot status).
2. Whole-Bundle offers must price every item they cover.
3. Needer sees offers grouped: "Whole-Bundle offers" and "Per-item offers".
4. Default limits: 3 whole-Bundle offers + 3 per item (configurable; see open decisions).

Other actions

- **Save** → toggles bookmark; saved items in "Saved" with tabs Needs / Bundles / Deals.
- **Share** → sheet with Copy link, WhatsApp, Facebook, X, Email. Link is canonical (`/needs/NS-24-08731`) and opens that exact item, not the top of the feed; private items respect permissions.
- **Love** → heart animation and count; analytics only (not a ranking signal by itself).
- **More (···)** → Card details, Copy link, Report (reason list), Hide, plus role-allowed actions.
- **Get Again / Book Again / Re-create Bundle** from history (Section 24).

09

Moderated public Messages

Like a social comment section — but reviewed, and never a backdoor to share contact details.

User flow

1. User clicks **Message** on a Need, Bundle or Deal → composer opens with the prompt: *"Give your honest comment or message on this Need / Bundle / Deal."*
2. Live inline validation blocks phone numbers (digits or spelled out), emails, URLs, social handles, and disguised variants ("zero seven eight...", "name at gmail dot com", spaced digits). Show a friendly reason: "For your safety, contact details can't be shared here."
3. On submit, the message appears in the sender's own view with a `Pending review` chip; other users don't see it yet.
4. Admin or a specifically authorised verified Partner approves → becomes public in the comment section. Rejected → sender sees reason, can edit and resubmit.
5. Public messages show avatar, name, time, Love, Reply (also moderated), Report.

Moderation console (Admin)

- Queue table: message, item link, sender, detected risks (contact info, spam, abuse, duplicate), age; actions Approve, Reject with reason, Edit-and-approve, Ban sender.
- Layered detection: regex + pattern variants + duplicate + rate limit + manual. Moderation history per user.

- Keep public Messages fully separate from private chat; approval never unlocks contacts.

10

Public website pages

SEO-friendly, fast, trust-building. Opening feel inspired by TheFixerHub (request first) with Amazon's merchandising density.

Home page (top to bottom)

1. **Hero:** navy background with warm photo of a Kigali provider and customer; headline "Get your needs served."; sub-line about verified Partners and escrow; one big input "What do you need served today?" + category quick chips + **Post a Need** (free) and **Browse Deals**. Trust row: ✓ KYC-verified Partners · 🛡 Escrow protection · ⏱ 24/7 support.
2. **Live stats strip:** Needs served, verified Partners, districts covered, average rating.
3. **Category tiles** (Amazon-style 4×2 grid with image and count).
4. **Today's Deals** carousel with countdown (few Deal cards) → "See all Deals".
5. **Latest Needs** snapshot (few Need cards) → "Browse Needs".
6. **Popular Bundles** snapshot (few Bundle cards) → "Browse Bundles".
7. **How it works** 7-step visual (Submit → Close) with Needer / Partner toggle.
8. **Top Partners** carousel with ratings and verified badges + Follow.
9. **Reviews** from verified transactions.
10. **Earn with Needibi:** Become a Partner / Become an Agent split banner.
11. **App download** band with phone mockup; FAQ teaser; footer.

Other public pages

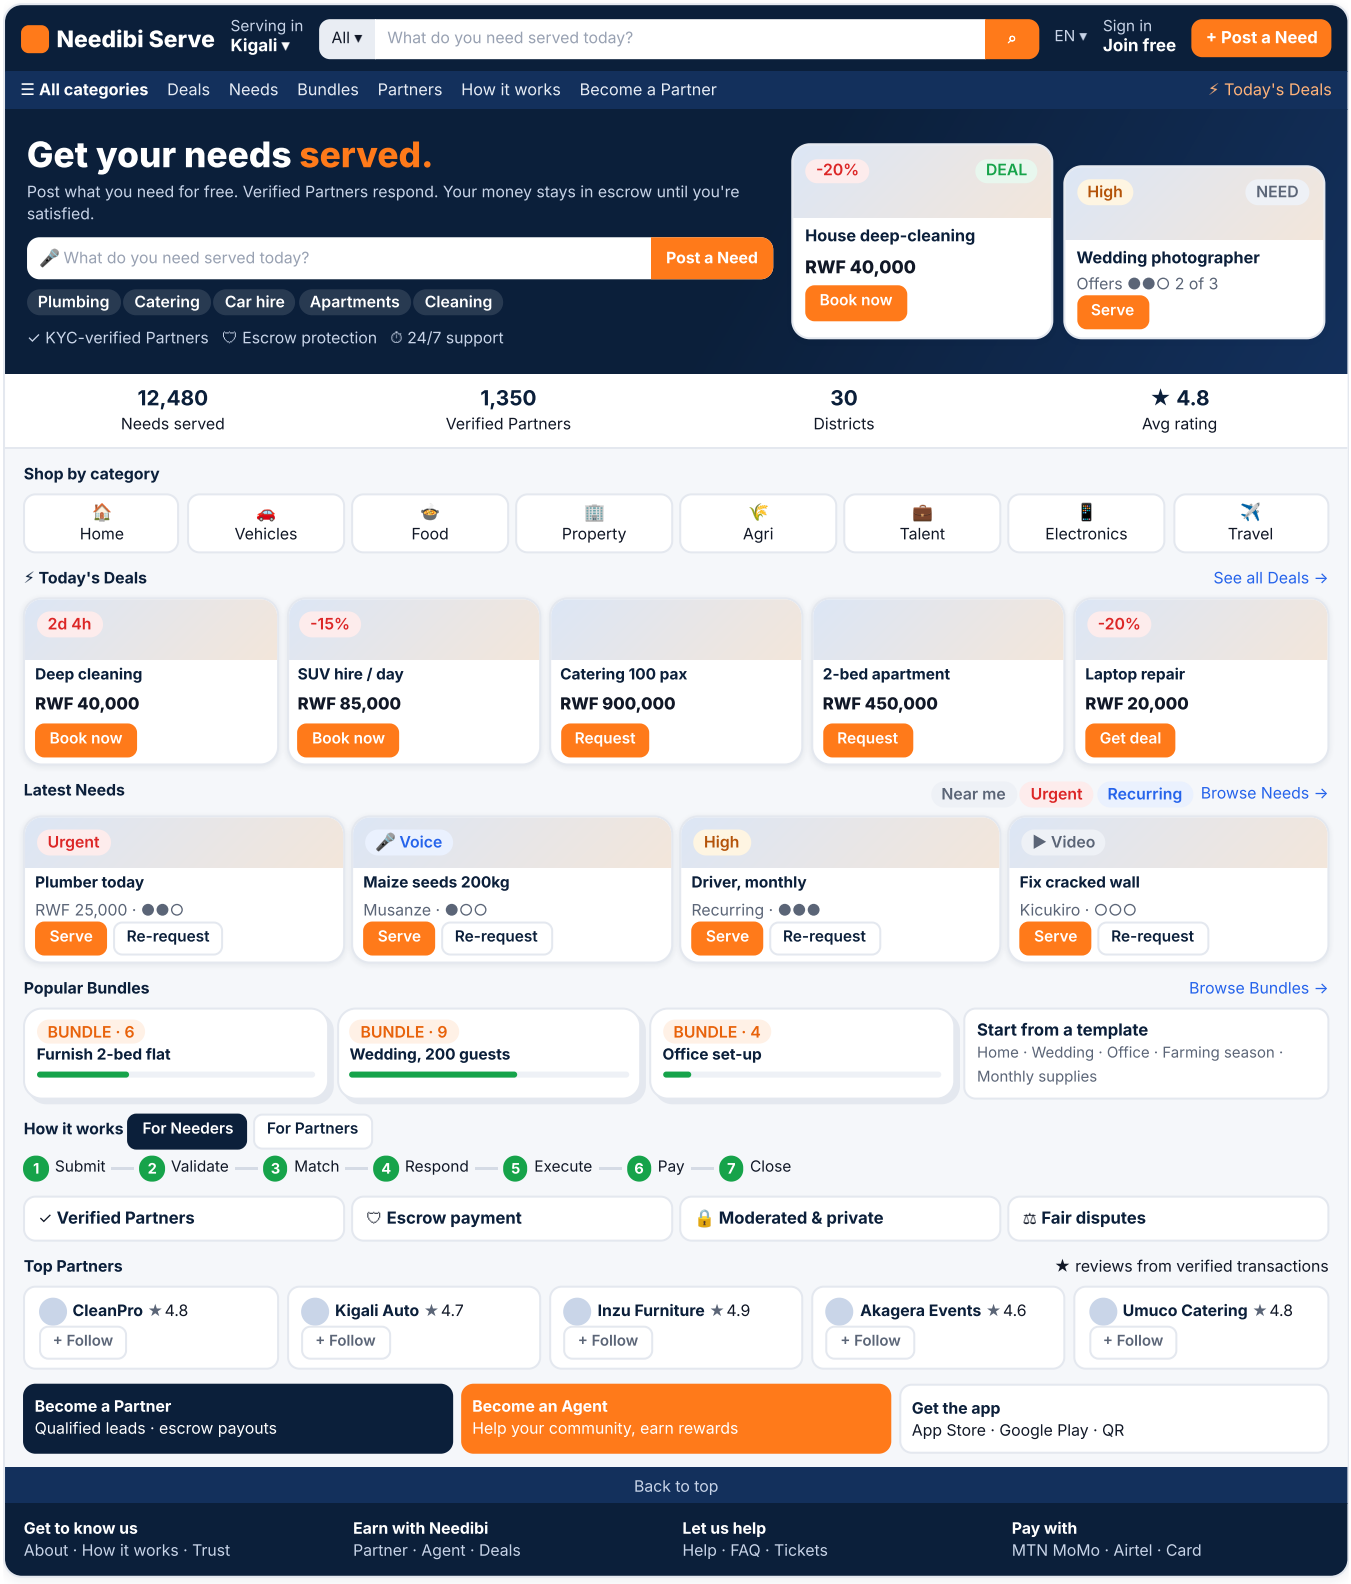

Page	Content
Needs board	Social-feed-style list mixing Need and Bundle cards; filters (category, urgency, area, budget, one-time/recurring), sort; tabs For You / Latest / Near me / Urgent; guests get sign-in prompt on actions.
Deals (Offers board)	Amazon-style listing: left filter sidebar, grid, category tabs with counts, sort; Today's Deals strip.
Bundles	Professional Bundle gallery: themes (Home setup, Events, Business start-up, Farming season), item count, total budget, recurring mix.
Categories	All categories with counts, subcategory drill-down, top Deals and Partners per category.
Partners directory	Search, filters (category, area, rating, verified), Partner cards with Follow.
How it works	Step-by-step walkthrough for Needers, Partners, Agents; video; FAQ.
Become a Partner / Agent	Benefits (qualified leads, escrow payments, reputation), requirements, fees/plans, steps, CTA to sign up.

Page	Content
Trust & Safety	Verification, escrow, moderation, disputes, privacy; "Approval ≠ guarantee" explanation.
About, Contact, Careers	Mission, team, contact form with validation, map, phone, email, 24/7 support.
Help Centre, FAQ, User manual	See Section 32.
Terms, Privacy, Cookies, Partner agreement	Stepped, readable legal pages with table of contents and version date.
Request a Need (public)	Short guest form with live validation and coverage check; asks to sign up at the end to publish.
404 / 500 / Maintenance	Branded, helpful, with search and links back.

10A

Landing page blueprint — Deals, Needs & Bundles

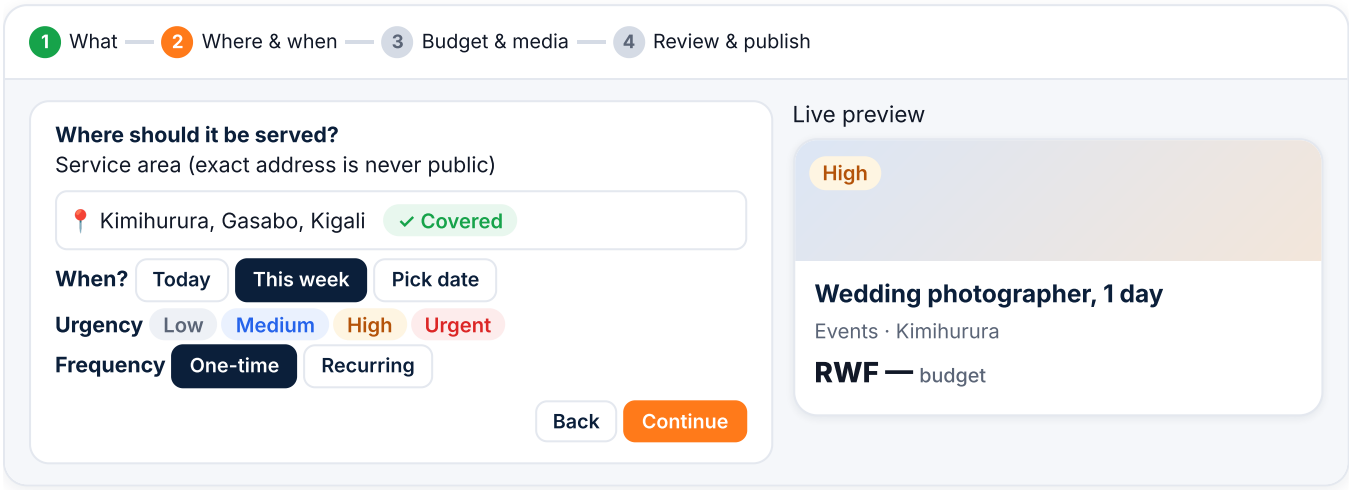

The full public home page, top to bottom, built from real card components and mock data. Logged-in users also get a **Recommended for you** feed, a Reviews band and a FAQ teaser. Guests who click Serve, Love, Save, Message or Book get a sign-in modal that returns them to the same card.

11

Smart Request (Post a Need) & Bundle builder

Make it exceptionally easy to describe exactly what someone needs — by typing, photo, video or voice. Live card preview on the right (desktop) or a "Preview" tab (phone).

Steps and fields

Step	Fields & behaviour
1 · What	Single Need or Bundle toggle · "Describe what you need" (text) *or* record voice note (30 MB, waveform, re-record) *or* upload photo (5 MB each) / video (100 MB) with progress · smart title suggestion · category & subtype auto-suggested from text (editable) · quantity · specifications (dynamic fields per category, e.g. vehicle make/year; property bedrooms).
2 · Where & when	Service area with GPS "Use my location", district/sector picker, coverage check · timeframe (today, this week, date, date range) · urgency · one-time or recurring (frequency daily/weekly/monthly, number of cycles, schedule days & time).
3 · Budget & media	Budget in RWF with market guidance ("Similar needs: RWF 20,000–35,000") · price negotiable toggle · extra attachments · language of the request.
4 · Review & publish	Visibility Public or Private · publish as My identity or Anonymous · optional Priority boost (fee shown) · policy & terms checkbox · full preview → Publish.

- **Incomplete-profile gate** before posting (verify phone, set name) with a friendly modal; draft auto-saved.
- **Success page:** confetti-lite animation, need code, status "Under review / Live", "Matching Partners near you" preview, share, track.
- **Agent mode:** same form with "Posting for: [linked Needer]" banner.

Bundle builder

- Bundle title, goal/occasion, cover image, service area, overall timeframe.
- Item list (add, duplicate, reorder by drag, remove): each item = mini Need (title, category, quantity, specs, budget, urgency, one-time or recurring with its own schedule).
- Sticky summary: item count, recurring vs one-time count, total budget (auto-sum), "Allow partial serving" toggle.

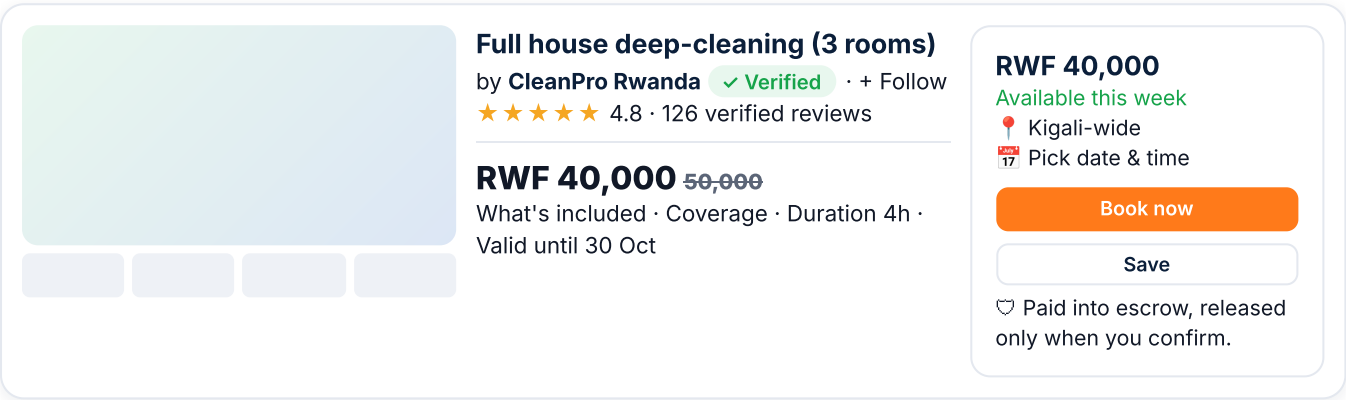

- Templates gallery: "Furnish a home", "Wedding", "Office set-up", "Farming season", "Monthly household supplies".

12

Detail pages: Need, Bundle, Deal, Partner

Amazon product-page clarity: media left, decision box right, details and social proof below.

Deal detail (Amazon PDP pattern)

- Left: gallery (images, video, audio). Centre: title, Partner with badge & Follow, rating, price, key facts, description, specs table, custom inputs the deal asks for. Right: sticky **Offer box** — price, availability, area, date picker, quantity, primary action (Get / Book / Request), Save, Share, escrow note, guest sign-in gate.
- Below: Rating breakdown (5→1 bars) + verified reviews with filters; moderated Messages; "Similar Deals"; "More from this Partner"; "People who booked this also needed...".

Need detail

- **Public view:** media, title, badges, area, timeframe, budget, recurrence, poster/Anonymous, need code, slot meter, Messages, Similar Needs; Partner sees Serve box on the right.
- **Owner view adds:** lifecycle stepper; Action-needed panel; **Offers received** (compare table: Partner, rating, price, timeline, inclusions, validity; Accept / Reject / Ask clarification); assigned Partner + chat; agreement; payment; event timeline; price history; Confirm satisfaction; Raise a dispute; Edit / Submit revision; Archive; Re-need; Re-request.

Bundle page (professional, not just "recurring")

- Header: cover, title, goal, area, total budget, items count, overall progress ring, recurring/one-time breakdown.
- Tabs: **Items** (each item row: status, budget, offers, assigned Partner, next occurrence for recurring, blocked badge) · **Offers** (Whole-Bundle vs Per-item groups) · **Agreements** · **Payments** (finance summary per item and total) · **Timeline** · **Messages**.
- Complete only when every required item is completed or resolved by agreed terms; recurring items tracked per occurrence.

Partner profile (public)

Cover, logo/avatar, business name, verified badge, level, categories, service areas, languages, member since, response time, fulfilment reliability (when data is reliable), Follow, Approved Deals grid, verified reviews with breakdown and Partner replies, guild memberships. **Never** show phone, email, links, documents or confidential transaction data.

13

Matching engine UI (three modes)

Admins switch the matching mode globally or per request type (Needs vs Bundles). Search helps people discover; matching selects eligible Partners — they are separate systems.

Mode A · Manual
Staff assign Partners to a Need, an entire Bundle, or selected Bundle items. Admin "Assign" drawer shows ranked suggestions, Partner workload, rating, distance, availability; assign with note. Best for early operations and sensitive cases.

Mode B · Automatic
System ranks Partners by category & specs fit, service area & distance, availability & capacity, recurring capability, ratings, reliability, responsiveness, delivery time, experience. **Verification & eligibility are hard filters**, not scores. Partners receive time-limited offers with countdown, fit score, Accept / Decline, auto re-offer on expiry.

Mode C · Limited-Offer
First 3 eligible Partners who click Serve fill the slots. Needer accepts, rejects or asks clarification. Rejected / expired / withdrawn offers release slots. Reject-all restarts the round with new Partners. When fulfilled, other offers auto-close.

UI elements for Limited-Offer mode

- **Slot meter** on cards and detail: ●●○ "2 of 3 offers". When full, Partners see "Offers are full — we'll notify you if a slot opens" + **Notify me** toggle.
- Needer offer inbox: compare up to 3 side by side; "Reject all and find new Partners" with confirmation.
- Admin alert when rejections reach threshold (default 15, configurable) — track rejected offers and fully rejected rounds separately; case appears in "Needs attention".

Admin matching settings page

- Mode selector (cards with description) for Needs and for Bundles separately.
- Offer limits (per Need, per whole Bundle, per Bundle item), offer timer length, rejection alert threshold, auto-dispatch toggle.
- Ranking weights sliders for automatic mode with preview "Top 5 Partners for a sample Need".
- Partner performance table feeding the algorithm; change log with who/when.

14

Offers, negotiation & agreements

Offer card (what the Needer sees)

Partner avatar, name, verified badge, rating, distance · price (and breakdown) · scope / what's included · timeline & availability · validity countdown · attachments · scope label "Whole Bundle" or "Item: Sofa" · actions Accept, Reject (optional reason), Ask clarification.

Negotiation

- Pinned **Price panel** at the top of the transaction chat: current budget, latest proposal, fee breakdown, buttons Confirm & update card, Counter-offer, Decline. Agreed price syncs to the Need card for both sides with label "Agreed price".
- Price history timeline on the Need detail.
- Accepting an offer closes only incompatible offers for the same scope (e.g. other offers on the same Bundle item).

Agreements / contracts

- Auto-generated structured agreement: accepted offer, provider identity, scope, specs, quantities, price, fees, taxes, payment arrangement, deadlines, cancellation/refund/rescheduling terms, responsibilities, recurring schedule, acceptance timestamp, version history.
- Contract viewer: readable document, "Type your full name to sign" box with date, Download PDF, status chips (Draft, Sent, Signed by one party, Fully signed, Cancelled).
- Lists: Need, Bundle and Deal contracts with status filters for Needer and Partner.
- Admin: contract table + stats, template editor with placeholders (`{needer_name}` , `{price}` ...) and autosave, send contract.

15

Private transaction chat

A premium, paid-app-quality chat — but only inside authorised transactions.

Access rules

- Needers cannot start chats with any Partner or Admin.
- Partners open chat only via the **Chat** button on an eligible request card; the button shows a lock 🔒 and is inactive until it's confirmed the request will be served (configurable stage).
- Admins open chat with Needers via the Chat button on request cards. Agents see only assigned cases.
- Once opened, the Needer can reply. Partners cannot see other Needers unless allowed by an approved request.
- Optional **limited offer clarification** thread before acceptance (structured Q&A, no contacts) so negotiation isn't blocked.

Chat UI

- Three-pane on desktop: conversation list (search, filters: Active, Awaiting reply, Closed) · thread · context panel (linked Need/Bundle/Deal card, offer, agreement, payment status, quick actions).
- Bubbles with timestamps, read ticks ✓✓, typing indicator, online presence, image/file/voice attachments, system messages (status changes) in neutral chips.
- Contact-detail blocking inside chat until the configured stage; then "Contact details unlocked" notice.
- Report / Escalate to Needibi; becomes read-only after completion or cancellation.
- Group chats for Bundles with multiple Partners (admin-created).
- Admin inbox with SLA timers, breaches highlighted, stats.

16

Payments, escrow & payouts

> **Escrow trust banner (show at every payment step)**
> 🛡 Your payment is held safely by Needibi Serve and released to the Partner only after you confirm you're satisfied.

Checkout

- Methods: **MTN MoMo**, **Airtel Money**, Card, Upload proof (bank transfer or cash deposit with reference).
- States: Pending, Verifying, Paid, Failed. MoMo "Approve on your phone" waiting screen with timer; card return success/failure; proof upload with reference; receipt page with reference number and download.
- Fee breakdown example: Service RWF 450,000 → Partner 85% RWF 382,500 · Platform 15% RWF 67,500. Rates vary by Partner level and priority boosts; promo codes applied here.
- Milestone payments for large jobs and Bundles; per-occurrence billing for recurring items.

Partner wallet

KPIs Total earned · Paid out · Pending (in escrow) · Available · monthly table with escrow status · payout schedule and history · payout method · fee calculator.

Admin money

All payments with escrow state · manual proof verification queue · escrow transitions (Held → Released / Refunded / Partially refunded) with confirmation and reason · wallets · payout preview and batch processing · fee rules and per-Partner commission overrides.

Note: obtain legal and compliance guidance (BNR rules) before going live with escrow or payment splitting.

17

Fulfilment tracking

Make the journey from request to delivery visible and accountable — like Amazon order tracking.

- Horizontal lifecycle stepper with date stamps; vertical event timeline with actor, time and evidence.
- Partner actions: Start service, Upload progress evidence, Mark delivered (photos, notes). Needer actions: Confirm satisfaction (triggers escrow release + review request), Report a problem.
- Recurring: occurrence calendar (upcoming, done, missed), skip/reschedule requests, per-occurrence status.
- Tracking page for Needs and Bundles with KPIs, timelines, progress, blocked-item badges; deadline countdowns and overdue flags.

18

Reviews, follow & reputation

- After a qualifying fulfilled transaction: review prompt — 5 stars, quick tags (On time, Professional, Good value, Clean work…), comment, photos; labelled "Verified transaction"; partial fulfilment reviews clearly labelled.
- No duplicate or ineligible reviews; moderation of abusive/fake reviews; Partner can reply once.
- "My ratings" page for Needers; Partner reviews page with breakdown.
- Trust badges (Verified, Top Rated, Fast Responder, Level 1–3) — admin can award and revoke.
- Follow Partners from Deal cards and profiles; "Following" feed of their new Deals. Following never grants access to private Needs or chat.

19

Disputes & support tickets

Disputes

Raise a dispute from Need/Bundle/Deal/offer/fulfilment: reason, description, evidence upload, desired resolution. Case page: timeline, evidence from both sides, assigned admin, status, resolution (refund, release, partial), appeal option. Admin: dispute table, stats, resolution actions, CSV export. Substantiated misconduct lowers Partner eligibility and visibility.

Support tickets

Needers and Partners create tickets: unique ID, role, category, priority, linked item, description, attachments. Statuses: Open → Assigned → Awaiting User/Partner → Escalated → Resolved → Closed. Admin view separates internal notes from user replies; SLA timers; Agents help only when assigned.

Appeals: users can challenge significant moderation or account decisions through a defined form and tracked case.

20

Notification centre

Notify about what needs attention, not every minor event.

Role	Triggers
Needer	Need/Bundle approved or needs changes · relevant Deal found · new offer · offer revised · counter-offer · offer accepted/rejected · fulfilment progress · recurring occurrence approaching · deal about to expire · request unanswered too long · problem needs attention · payment request.
Partner	Relevant request available · offer accepted/declined · clarification requested · slot opened · fulfilment deadline approaching · scheduled occurrence changed · Deal approved/rejected · verification status · report/dispute needs response · payout sent.
Agent	New assigned case · follow-up due · referral activated · reward earned.
Admin	Pending reviews · high-priority requests · suspected fraud · Partners awaiting verification · overdue fulfilment · rejection threshold reached · disputes and unresolved cases · SLA breaches.

- Bell dropdown + full page grouped Today / Earlier, filters by type, Mark all read, deep links to exact item.
- Priority levels: Critical Action required Reminder Info . De-duplicate; quiet hours.
- Channels: in-app, push, email, SMS/WhatsApp where consented. Preferences page per category and channel; essential security and transaction alerts cannot be switched off.

21

Search & discovery

- Unified search (header) with scope; results page with type tabs (All, Needs, Bundles, Deals, Partners) and counts; Amazon-style left filter sidebar; chips for active filters; "Did you mean"; zero-results state suggesting Post a Need.
- **Common filters:** type, category, location, publication date, availability, status (authorised users).
- **Needs:** budget, urgency, specifications, quantity, service location, one-time/recurring. **Deals:** price range, Partner, specs, availability, coverage, validity. **Bundles:** one-time/recurring, number & type of items, total budget, frequency, location, availability.
- **Sort:** Most relevant, Recently published, Price low→high, Price high→low, Nearest, Recently updated. Do not rely only on popularity.
- Language-aware search; only approved, currently published content is public. Smart "For You" by category, location and history.

22

Social feed & engagement

- Social feed (For You, Following) with image, carousel, reel and thread posts from Partners and Needibi; trending hashtags; Reels page; Studio for Partners to create, edit, delete posts (posts can link a Deal).

- Comments use the moderated Message rules. Guests see the public feed with sign-in prompt on interaction.
- Saved & Liked pages with tabs Needs / Bundles / Deals.

23

Accounts, login & security

Sign up

- Wizard: choose role (Needer, Partner, Agent) with illustrated cards → role-specific fields → verify.
- Username availability check, phone with +250 picker, country auto-detect, password strength meter.
- **Continue with Google**, **Apple** (if supported), phone + OTP, email + password — social login like Vuba Vuba's simple flow.
- Referral / promo code field (optional).
- Social login never bypasses Partner verification.

Partner onboarding

- Business info, categories & subtypes, service areas, languages, capacity, recurring capability.
- Verification: ID upload + selfie (liveness), business documents; status tracker.
- Partner agreement (version, read, sign); subscription plan selection.

Login & recovery

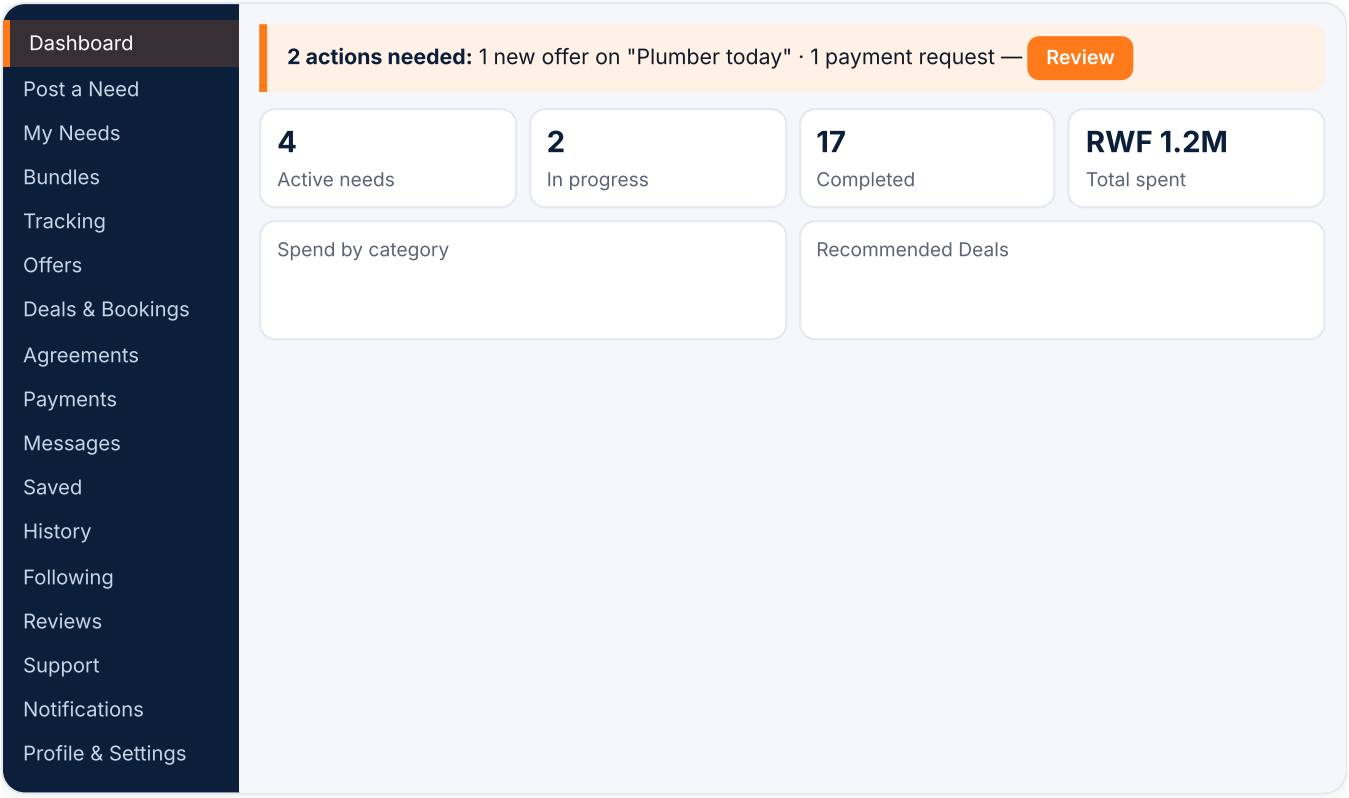

- Login with remaining-attempts error and lockout countdown.
- 6-digit OTP (3-minute validity, resend countdown), via phone or email.
- Forgot / reset password; verify account; choose role for multi-role accounts.

Security settings

- Active sessions, login history, log out, log out of all devices.
- Two-step verification toggle.
- Contact privacy settings; data download; delete account with grace period and cancel.
- My activity: monthly audit trail.

24

Needer dashboard

- **Home:** Action-needed banner, KPIs (active, in progress, completed, total spent), spend-by-category and monthly charts, recent Needs, offers awaiting decision, recommended Deals, recurring occurrences this week.
- **My Needs:** status-group tabs with counts, table or card view toggle, next-step hint per row, search, edit, submit revision, archive, closed behind toggle.
- **Bundles:** items, progress, finance summary, blocked-item badges.
- **Deals & Bookings:** status, payment state, booking detail, Confirm satisfaction, Book Again.
- **Saved:** Needs / Bundles / Deals tabs. **History:** past Needs, Bundles, Deals, offers and decisions, completed fulfilment, recurring occurrences — with **Re-request**, **Re-need**, **Get/Book Again**, **Re-create Bundle**.
- **Profile:** avatar, verified badge, category interests, location, languages; public view shows saved/history only to owner. **Settings:** theme, language, notifications, security, contact privacy, location.

25

Partner dashboard

Make serving effortless: clear queue of opportunities, one-click responses, transparent money.

Sidebar item	Content
Home	Today's opportunities, active jobs, earnings this month, commission breakdown, performance score (response rate, on-time, rating), charts, pricing reminders, verification/plan status.
Requests (Needs & Bundles)	Matched / offered cards with countdown and fit score; buttons **Serve**, **Chat** (🔒 until confirmed), **Reject** (reason required → admins notified). Filters by category, area, urgency, budget.
My Offers	Submitted, clarification needed, accepted, rejected, expired; edit/withdraw.
Active Jobs	Incoming, active, pending quotes, completed this month; allowed status transitions; Mark delivered with evidence; recurring calendar.
My Deals	Create/edit Deal: title, category, type (product/service/vehicle/property/professional/custom/bundle), price, discount & validity, images, video, audio, order limit, coverage, custom client input fields, language → Submit for approval. Status chips; stats (views, saves, bookings).
Booked Deals / Orders	Bookings with client inputs, schedule, payment state, Mark done.
Earnings & Payouts	Wallet, escrow status, payout schedule/history, fee calculator, invoices.
Agreements, Messages	Contracts list, chat inbox.
Profile & Reputation	Public profile editor, reviews & replies, badges, followers, Studio posts.
Guilds, Verification, Plan	Guild membership, KYC status, Partner agreement, subscription plan & billing.
Support	Tickets, disputes, help articles for Partners.

26

Agent dashboard & referrals

Two clearly different, well-designed workspaces: **Needer Assistance** and **Partner Assistance**.

Needer Assistance

Linked Needers list · "Post on behalf" (Smart Request with banner) · voice-first capture for people who can't fill forms · manage their Needs, offers, bookings · follow-up tasks with due dates · consent record for acting on behalf.

Partner Assistance

Register Partner wizard · upload verification documents with the Partner · onboarding checklist and status · help them publish first Deal · follow-ups and escalations.

- **Home:** stats (assisted Needers, onboarded Partners, conversions), today's follow-ups, assigned cases (Needs, Bundles, booked Deals), escalations.
- **Referrals:** personal referral code + QR + share link; table of referred users with status (Signed up → Verified → First completed transaction); rewards earned, pending, paid; monthly commissions.
- **Promo codes** are separate from referral codes (admin-created discounts).
- Rewards are tied to verified activation or completed eligible transactions, not raw sign-ups; fraud flags shown.
- Agents only see assigned cases — no broad access.

27

Admin console

Area	Screens & actions
Overview	Platform KPIs, fulfilment rate (primary metric), role summary, charts, pending approvals, "Needs attention" (unanswered requests, rejection-threshold alerts, overdue jobs, fraud flags).
People	Users, roles, permission matrix with per-user overrides; Needers, Partners, Agents with search, details, edit, suspend, bulk approve/reject with reason; Partner verification queue (ID, selfie, documents).
Needs & Bundles	Review queue cards with **Approve**, **Chat**, **Reject** (reason) and Request more info; awaiting revision; all/approved/rejected; bundle tracker (approve, archive, restore, status, guild matching); manual assignment.
Deals	Approval queue, deal table, filters, feature/unfeature, auto-matching scores per Partner, assign Partner.
Matching	Mode switch, limits, timers, thresholds, weights (Section 13).
Moderation	Public Messages queue, reports, reviews moderation, banned terms list, social posts.
Guilds & Categories	Create guilds, assign categories and Partners, assign Bundle to guild with preview; categories with subtypes, dynamic spec fields, status toggle; sign-up option manager.
Money	Payments, escrow, proof verification, payouts, fees, commissions & per-Partner overrides, subscriptions, promo codes, referral rewards.
Trust & Safety	Disputes, appeals, trust badges, contracts & templates, fraud signals.
Support	Tickets with SLA, chat inbox, canned replies.
Content	Home page merchandising (featured Deals/Needs/Bundles, banners), Help Centre & FAQ editor, user manual, legal pages, app links.
Reports & logs	Daily/weekly/monthly/yearly reports with export; audit logs and activity logs with filters, stats, CSV export.
Settings	Platform intelligence rules, contact privacy matrix, pricing guidance, languages, notification templates, tasks.

Admin UX rules

Every table: search, filters, sort, pagination, page size, refresh, bulk actions, export, skeletons. Destructive actions need confirmation; rejections need a reason; every sensitive action is written to the audit log and shown in item timelines.

27A

After login — complete app map for every role

Every item is a route to design and build. T = management table with pagination (Section 27B). F = card feed with infinite scroll.

Same shell for all roles

Navy sidebar with grouped items and counts · top bar with breadcrumb, search, role switcher, theme, language, bell, avatar · page header with primary action · Action-needed banner · KPI row · content. Users with several roles switch without logging out.

27B

Management tables & React pagination

One shared `DataTable` + `Pagination` powers every management list. Server-side, URL-synced, fast and good-looking.

Behaviour rules

- **Server-side:** `GET /api/needs?page=3&pageSize=25&sort=-createdAt&status=matching&q=` → `{ data, meta: { page, pageSize, total, totalPages } }`.
- **URL = source of truth** (`useSearchParams`): page, size, sort, filters and search survive refresh, back/forward and shared links.
- Filter / search / size change → back to page 1; search debounced 300 ms.
- TanStack Query `keepPreviousData`: old rows stay (dimmed) with a thin top progress bar; next page prefetched.
- Page sizes 10 / **25** / 50 / 100, remembered per table.
- First, Prev, numbers with ellipsis, Next, Last, Go-to; current page = orange pill; `aria-current="page"`; counter in `aria-live`.

States & extras

- Skeleton rows matching columns; Empty (illustration + action); No results ("Clear filters"); Error (Retry).
- Select-all on page → banner "Select all 1,240"; sticky bulk bar.
- Toolbar: refresh, column visibility, density, CSV export of current filters, saved views (Admin).
- **Phone:** rows become stacked cards; compact control `‹ Page 3 of 50 ›`.
- **Feeds vs tables:** public Needs/Deals/Bundles feeds use infinite scroll (with page numbers at the bottom for SEO); chat and notifications use "load older".

- Header click sorts asc → desc → none.

```
<DataTable<Need>
  queryKey={['needs']}  fetcher={(p) => api.needs.list(p)}   // returns { data, meta }
  columns={needColumns}  statusTabs={needStatusTabs}
  filters={[categoryFilter, urgencyFilter, dateRangeFilter]}
  defaultSort="-createdAt"  pageSizeOptions={[10, 25, 50, 100]}
  bulkActions={[archiveAction, exportAction]}  rowActions={(row) => <NeedRowMenu need={row} />}
  viewToggle={{ card: (row) => <NeedCard need={row} compact /> }}
  emptyState={<EmptyState title="No needs yet" action={<PostNeedButton />} />}
/>
<Pagination page={meta.page} pageSize={meta.pageSize} total={meta.total}
  onPageChange={setPage} onPageSizeChange={setPageSize} siblingCount={1} boundaryCount={1} />
```

28

Monetization settings

- Configurable models: Partner subscriptions, transaction commissions, clearly labelled paid placements ("Sponsored"), priority boosts, Agent fees/rewards.
- Plan builder: name, price, currency, tax, billing period, features, usage limits (offers/month, Deals live), trial, promo pricing, renewal, suspension rules.
- Commission rules: percentage, fixed fee, per category, per Partner level, Bundle rules. All prices editable by Admin.
- Public pricing page explaining who pays what, when, and refunds. Paid visibility never implies verification or quality.

29

Analytics & success metrics

Primary metric (hero tile on admin Overview)

% of eligible Needs fulfilled within the agreed timeframe — always shown beside satisfaction, dispute rate and cost.

Discovery	Demand	Fulfilment	Supply	Business
Impressions, search-to-detail, saves, shares, discovery sources.	Needs submitted, approval/rejection rate, % with offers, time to first offer, abandoned forms.	Offer acceptance, completion rate, median time to fulfil, cancellations, disputes, recurring retention.	Verified active Partners, response rate, offer quality, availability, reliability.	Cost per fulfilled Need, revenue per transaction & Partner, repeat users, Agent productivity, margin.

30

Multilingual support

- Interface languages: English, Kinyarwanda, French, Swahili (extendable). Language switch in header and settings.
- Content language is separate from interface language; Needs and Deals can be posted in any supported language.
- "Translate" link on content with clear "Translated from Kinyarwanda · Show original"; Partner language preferences used in matching; admin review for unsupported language content.
- Design for text expansion (+35%); never hard-code strings.

31

Privacy & fraud prevention

- Public Needs show service area only; phone, email, exact address masked until a successful match/authorised stage, then "Contact details unlocked" notice. Admins see full details (logged).
- Role-based access, rate limits on submissions and offers, duplicate/spam detection, bot protection, suspicious Partner behaviour flags, secure media uploads, retention & deletion controls, consent and privacy notices, audit logs.
- Privacy matrix screen (Admin): which role sees which field, document, message, location and record.

32

Help centre, FAQ & user manual

Lightweight, searchable, and complete enough that anyone can understand Needibi Serve fully.

- Help Centre home: big search, topic tiles by role (Needers, Partners, Agents), popular articles, "Still need help? Open a ticket".
- Articles with screenshots / short GIFs, "Was this helpful?", related articles. Only document live features; label planned ones "Coming soon".
- Contextual help: "?" icons and side help panel in complex flows (Post a Need, Serve Bundle, Payments).
- **User manual** as a guided, chaptered page (and downloadable PDF) per role; first-time product tours with skippable tooltips.

FAQ set to write and design (accordion, grouped)

Getting started

- What is Needibi Serve?
- Is posting a Need free?
- Who can be a Partner or Agent?
- Which areas do you cover?
- Which languages can I use?

Payments & escrow

- How does escrow protect me?
- Which payment methods are accepted?
- When is the Partner paid?
- What are the fees?
- How do refunds work?

Needs & Bundles

- How do I post a Need by voice, photo or video?
- What is a Bundle and when should I use one?
- What's the difference between Re-need and Re-request?
- Why is my Need under review?
- Can I post anonymously or privately?
- How do recurring Needs work?

Offers & matching

- How are Partners matched to my Need?
- Why can I see only 3 offers?
- What happens if I reject all offers?
- Can a Partner serve only part of my Bundle?

Trust & safety

- What does "Verified Partner" mean?
- Does approval guarantee quality?
- Why can't I share my phone number in Messages?
- How do I raise a dispute or appeal?
- How is my data protected?

Partners & Agents

- How do I get verified?
- How do I publish a Deal?
- When does chat unlock?
- How do subscriptions and commissions work?
- How do referral rewards work?

33

Shared states, responsive & accessibility

States for every screen

- Loading skeletons matching layout (no spinners on whole pages).
- Empty states with illustration + next action ("No Needs yet — Post your first Need").
- Error with retry; offline banner; success toasts with Undo where safe.
- Confirmation dialogs for destructive actions; reason prompts for rejections.
- Disabled-with-reason tooltips (e.g. 🔒 Chat unlocks after confirmation).

Responsive

- Breakpoints: 360, 640, 768, 1024, 1280, 1440.
- Grid: 5 cards/row ≥1440, 4 at 1280, 3 at 1024, 2 at 768, 1 (or 2 compact) on phone.
- Sidebar collapses on tablet, becomes drawer on phone; tables become stacked cards; sticky bottom action bar on phone detail pages.

Accessibility (WCAG 2.2 AA)

- Contrast ≥ 4.5:1 for text; orange buttons use bold 14px+ white text or Orange 600.
- Full keyboard navigation, visible focus ring (2px orange + offset), skip link.
- ARIA labels for icon buttons; live regions for toasts and chat.
- Touch targets ≥ 44px; never colour-only status (icon + text).
- Captions for videos; transcripts option for voice notes.

Performance

- LCP < 2.5s on 4G; code-split routes; image CDN; prefetch on hover.
- Light and dark theme, remembered per user.

34

- ☐ Saved, History, Following
- ☐ Reviews, Disputes, Tickets
- ☐ Notifications, Profile, Settings

Partner (≈15) · Agent (≈8) · Admin (≈30)

- ☐ All sidebar pages from Sections 25–27
- ☐ Serve drawer & Bundle chooser
- ☐ Deal editor
- ☐ Matching settings
- ☐ Moderation queue
- ☐ Escrow & payouts
- ☐ Reports & audit logs

Deliverables

1. Design system (tokens, components, states) in Figma and Storybook.
2. High-fidelity screens + clickable prototype for the main journeys: Post a Need → offers → agree → pay → track → confirm → review; Partner serve flow; Admin approval & matching.
3. React codebase with routes, components, mocked API (MSW) and sample Rwandan data (names, districts, RWF prices).
4. "Design decisions" log and accessibility report.

Acceptance criteria

- ☐ Brand colours and tokens used everywhere; no hard-coded colours.

☐ Need, Bundle and Deal cards distinguishable at a glance in a mixed feed.
☐ Terminology: Serve, Re-need, Re-request, Message, Private chat — consistent everywhere.
☐ No contact details visible publicly anywhere; Message filter blocks disguised contacts.
☐ Escrow note on every payment step; approval ≠ guarantee message on Trust pages and Deal pages.
☐ Every list has search, filter, pagination, skeleton, empty and error states.
☐ Works at 360px width; Lighthouse mobile ≥ 90 (public), a11y ≥ 95.
☐ All four languages switchable; no clipped text.

Roadmap & decisions to finalise

Phase	Scope
1 · Core platform	Auth, roles, Needs, Bundles, Deals, cards, approvals, Partner verification, manual matching, basic offers, saved items, history, sharing, basic notifications, support tickets, Help Centre.
2 · Transactions & trust	Agreements, private chat, payments & escrow, fulfilment tracking, Bundle fulfilment, reviews, disputes, full notifications.
3 · Growth & automation	Automatic and Limited-Offer matching, atomic slot allocation, Agent referrals, subscriptions, commissions, advanced search, analytics.
4 · Optimisation	Expanded languages & translation, smart request assistance, fraud detection, personalisation, performance, automation, social feed growth.

Decisions to confirm before build (designer: show both options where relevant)

Decision	Options / default used in this prompt
Bundle offer limits	Default: 3 whole-Bundle + 3 per item. Alternative: strict 6 total per Bundle.
Re-need publication	Default: instant after eligibility checks; review when policy requires.
Chat activation	Default: limited clarification before acceptance; full chat after offer accepted / agreement signed.
Accepted offers	Default: accepting closes only incompatible offers for the same scope.
Matching settings	Default: mode and limits configurable separately for Needs and Bundles.
Partial-fulfilment reviews	Default: review allowed per completed item, labelled "Partial".
Agent rewards	Qualifying events, who pays, payout timing, refunds, fraud safeguards — to define.
Privacy matrix	Which role sees each field, document, message, location, record — to define.

Final instruction to the designer

Build Needibi Serve around one clear promise: the Needer describes what is needed, Needibi Serve helps find appropriate options, and the Needer chooses how to proceed. Prioritise reliable fulfilment, transparent offers, moderation, privacy and accountability before extra complexity. Make it look and feel as polished, trustworthy and easy as Amazon and Alibaba — but unmistakably Needibi Serve, and built for Rwanda.
